5. Claims 1-2, and 4-11 are considered allowable since prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations of the detailed structure of the sense amplifier having a first transistor, with its gate terminal connected to a sense enable signal, a second transistor and a third transistor forming a current mirror, with their drain terminal being connected to a source terminal of the first transistor and a gate terminal of the second transistor being connected to a gate terminal of the third transistor, the gate terminal of the second transistor also being connected to a source terminal of the second transistor at a first node, said bit line also being connected to said first node; a fourth transistor having a gate terminal connected to the sense enable signal, a drain terminal of the fourth transistor being connected to the first node; a resistor being connected to a source

terminal of the third transistor at a second node; and an inverter having an input coupled to the second node, wherein an output of the inverter represents said output of the sense amplifier.
